Tasks Performed	6
Repository Administrator	6

Applicable and Reference Documents

- None

Introduction

The original title of the Deliverable was “**Deliverable 9.1: Github Repository**” but since the title is not representative of the location of the final Repository it has been renamed to a more generic “**Deliverable 9.1: Project Repository**”

Project Repository

The git repository that will be used by all consortium members to share code has been setup and is available at:

<https://gitlab.com/BeyondPlanck/repo>

The Gitlab repository offers all consortium members the ability to:

- Host their source code
- Create and assign each other Issues
- Share information in the form of Wiki pages
- Host and share Docker containers

Access to all parts of the repository is restricted to the consortium members only, but the ability exists to make it publicly available, if that is desirable at a later date.

Tasks Performed

- All current members of the BeyondPlanck consortium have been assigned accounts for the repository
- Initial wiki page structure has been created with contents like:
 - Basic Project info
 - Meetings and Teleconferences
 - Project Templates (slides and deliverables)
- Project Milestones for Deliverable Dates
- Individual Issues for each Pending Deliverable, assigned to the Deliverable Leader

Any new access accounts requests, or any repository maintenance requests for that matter, should be redirected to repository administrator.

Repository Administrator

The Administrator and Maintainer of the repository is Stratos Gerakakis (WP9, Planetek Hellas).
